Week 9 : Assignment 9

1) What is the worst case complexity of selection sort?
a) O(nlogn) b) O(logn) c) O(n)
d $O(n^2)$
Yes, the answer is correct. Score: 1
Accepted Answers:
d $O(n^2)$
2) What is the best case and worst case complexity of ordered linear search?
a) O(nlogn), O(logn) b) O(logn), O(nlogn) c) O(n), O(1) d) O(1), O(n)
Yes, the answer is correct. Score: 1
Accepted Answers: d) O(1), O(n)
3) Given an array arr = {12, 34, 47, 62, 85, 92, 95, 99,105} and key = 34; what are the mid values (corresponding array elements) generated in the first and second iterations?
a) 85 and 12 b) 85 and 34 c) 62 and 34 d) 62 and 47
Yes, the answer is correct. Score: 1
Accepted Answers: b) 85 and 34
4) When the Binary search is best applied to an array?
a) For very large size arrayb) When the array is sortedc) When the array elements are mixed data typed) When the array is unsorted

```
Yes, the answer is correct.
Score: 1
Accepted Answers:
b) When the array is sorted
1)
Consider the array A[]= {5,4,9,1,3} apply the insertion sort to sort the array. Consider the cost associated with
each sort is 25 rupees, what is the total cost of the insertion sort for sorting the entire array?
a) 25
b) 50
c) 75
d) 100
Yes, the answer is correct.
Score: 1
Accepted Answers:
c) 75
Select the code snippet which performs unordered linear search iteratively?
   a) int unorderedLinearSearch(int arr[], int size, int data)
          int index;
          for(int i = 0; i < size; i++)
            if(arr[i] == data)
               index = i;
               break;
          }
          return index;
  b) int unorderedLinearSearch(int arr[], int size, int data)
         int index;
         for(int i = 0; i < size; i++)
            if(arr[i] == data)
              break;
         return index;
```

```
c) int unorderedLinearSearch(int arr[], int size, int data)
         int index;
         for(int i = 0; i \le size; i++)
           if(arr[i] == data)
              index = i;
              continue;
         }
         return index;
 d) None of the above
Yes, the answer is correct.
Score: 1
Accepted Answers:
  a) int unorderedLinearSearch(int arr[], int size, int data)
      {
        int index;
        for(int i = 0; i < size; i++)
           if(arr[i] == data)
              index = i;
              break;
```

7)

}

return index;

```
What will be the output?
#include<stdio.h>
#define func1(a,b) a > b ? b : a
#define func2(a,b); {temp=a;a=b;b=temp;}
int main()
{
   int a=3, b=5,temp;
   if((3+func1(a,b)) > b)
   func2(a,b);
   printf("%d %d", a,b);
   return 0;
}
```

a) 35 b) 3 0 c) 50 d) 5 3 No, the answer is incorrect. Score: 0 Accepted Answers: d) 5 3

8)

Consider an array of elements arr[5]= {5,4,3,2,1}, what are the steps of insertions done while doing insertion sort in the array.

- a) 45321 34521 23451 12345
- b) 54312 54123 51234 12345
- c) 43215 32154 21543 15432
- d) 45321 23451 34521 12345

Yes, the answer is correct.

  int main()
   printf("%d ", a);
   int a=50;
   printf("%d ", a);
   return 0;
  }
a) 10 10
b) 10 50
c) 50 50
d) Compilation error
No, the answer is incorrect.
Score: 0
Accepted Answers:
d) Compilation error
```

Write a program to print all the locations at which a particular element (taken as input) is found in a list and also print the total number of times it occurs in the list. The location starts from 1.

For example if there are 4 elements in the array

5

6

5

7

If the element to search is 5 then the output will be

5 is present at location 1

5 is present at location 3

5 is present 2 times in the array.

Private Test cases used for evaluation	Input	Expected Output	Actual Output	Status
Test Case 1	30 50 90 30 70 30 30	30 is present at location 1.\n 30 is present at location 4.\n 30 is present at location 6.\n 30 is present at location 7.\n 30 is present 4 times in the array.	30 is present at location 1.\n 30 is present at location 4.\n 30 is present at location 6.\n 30 is present at location 7.\n 130 is present 4 times in the array.	Passed
Test Case 2	4 50 60 20 10 80	80 is not present in the array.	80 is not present in the array.	Passed
